

## Mark a whole class. Keep your whole weekend.

### What is Mark?

Marking is where SmartEducator began, and it remains the platform's most transformative feature. Upload your students' work, point SmartEducator at your mark scheme and let the platform do the heavy lifting.

The result isn't a simple right-or-wrong verdict. Every piece of student work is assessed thoroughly – against your mark scheme, question by question, criterion by criterion – with everything you need to understand the result and return to your students with confidence:

**Marks awarded per question and per mark scheme criterion**

**A written justification for each mark, framed for the teacher rather than the student**

**Colour-coded highlights show exactly which part of a student's answer informed each mark**

**Individualised, student-ready feedback for every submission**

**An AI detection report at paragraph level, visible to teacher only**

**A whole-class results summary, ready to review at a glance**

All of it editable, all of it yours – and back in your hands within minutes.

### How Mark Works

#### From submission to feedback in five simple steps:

##### 1. Upload your materials

Start by dragging and dropping your files into the platform – your question paper, mark scheme and student submissions. SmartEducator detects each document type automatically.

If students have included their name on their submission, the platform matches them to your class roster automatically. Any it can't match with confidence are flagged for you to assign manually.

No mark scheme to hand? No problem – SmartEducator will generate one based on the assignment and any context you've provided.

##### 2. Automatic marking

Once your materials are uploaded, SmartEducator gets to work. Each submission is marked question by question and, for every criterion, the platform:

- Awards marks based on the evidence in the student's answer
- Highlights the specific passage that informed each mark, colour coded per criterion so the reasoning is immediately visible
- Generates justification explaining why marks were awarded
- Produces student-facing feedback written to be constructive, specific and actionable

## How Mark Works

**3.**

### Review the results

For each student, the marking review screen gives you everything side by side:

- The question and the student's extracted answer
- The original submission document, toggleable so you can check against the source at any point
- The criteria panel – each mark scheme point with its mark, justification, student feedback and highlighted evidence

**4.**

### Edit anything

Every element of the marking output is fully editable before anything leaves the platform:

- Adjust any mark and the platform automatically re-marks the submission to keep everything consistent
- Rewrite or add to any piece of feedback
- Update any justification to reflect your own judgement
- Add personal comments to individual students before releasing

SmartEducator does the marking. You make the final call on every submission before it reaches a student.

**5.**

### Export when you're ready

When you're satisfied, you choose when and how feedback goes back to students:

**Release immediately** – feedback is pushed straight to your connected LMS, so students receive it through the platform they already use

**Hold for review** – review the whole-class summary first, make any final adjustments then release when you're ready

**Export as PDF** – download individual feedback documents per student, cleanly formatted and ready to distribute digitally or in class

### The Details We Think You'll Love

#### Handwritten submissions? Not a problem

Scanned, photographed or uploaded directly, SmartEducator reads handwritten work with the same accuracy as typed submissions. The rule of thumb: if you can read it, the platform can.

Student errors - spelling, grammar, crossing out or expression - are preserved exactly as written, so work is marked as submitted, not corrected.

#### Know exactly what your students wrote - and what they didn't

Every submission is scanned for AI-generated content at paragraph level. SmartEducator identifies not just whether AI was used, but which model was likely responsible – with a confidence rating per paragraph, trained specifically on frontier models from the major AI labs including OpenAI, Anthropic and Google.

Results are visible to the teacher only, don't affect the mark and don't appear in student feedback. Think of it as a guide and a conversation prompt – there if you need it, out of the way if you don't.

#### Consistent marking across every class and cohort

One of the less-discussed benefits of AI-assisted marking is consistency. When every submission is marked against the same mark scheme, by the same criteria, without fatigue or variation, the results are fair in a way that's genuinely difficult to achieve manually across a full marking load.

For school leaders, this matters beyond the individual classroom. Consistent, curriculum-aligned marking across departments means you can trust the data your insights dashboard surfaces – and act on it with confidence.

#### Your students don't need to change a thing.

Students submit work exactly as they do today – through Google Classroom, Canvas, Microsoft Teams or whatever platform your school uses. SmartEducator works behind the scenes.

**SmartEducator does the groundwork. You get the final say.**

### Ready to get your evenings back?

Start your 30-day trial and mark your first set of submissions today.

Upload your students' work and a mark scheme, then let SmartEducator show you what marking was always supposed to feel like!
